RE: Water System Water Quality Evaluation
City of Gordon PWS 1820007

Dear Mayor Keck:

Jacob & Martin received information from the ongoing water quality testing the City has had performed as well as site visits to the water treatment plant and the distribution system. Based on that information and incorporating input from field personnel, we've put together a list of recommendations intended to improve the water quality in the distribution system.

The City is currently feeding chlorine and ammonia at the water treatment plant to create chloramines in the water. Chloramines are not injected anywhere else in the system. The disinfection residual must travel through the main transmission line into town, the elevated ground storage tank on the hill, and the distribution system. Disinfection residuals dwindle over time and eventually bacterial growth in the system can occur due to low or absent residuals. This leads to more rapid reduction in residual which becomes very difficult to overcome.

The sampling that the City has had performed to date is twofold. Total chlorine residuals have been collected at least bi-weekly in an effort to verify the residual levels in the system over time. These samples have been taken at key points in the system including the Smokestack and Thurber area, the intersection of the main supply line and the distribution system at Houston Street, on Dairy Farm Road, and near the Barton WSC master meter. Results of these samples are attached and show that, for the most part, the residuals are kept at acceptable levels. However, some low residuals were recorded sporadically with the ones of most interest occurring in consecutive samples on October 16 and 21 and November 4 at the Houston and Barton WSC locations.

Water samples have also been collected for analytic laboratory analyses to determine if there

are any contaminants or constituents that would indicate issues with the disinfection regime. These samples were collected at the Thurber Pump Station, the main line on Houston Street, on Dairy Farm Road, and near the Barton WSC master meter. The contaminants included in the analysis were as listed below:

Iron	Manganese
Nitrate	Nitrite
Trihalomethanes	HAA5
Total Alkalinity	Total Hardness
Chlorine Residual (presence)	Total Coliform (Presence)
E-coli (Presence)	

None of the samples analyzed showed constituents at a level that would cause concern regarding water quality. Results of the laboratory analyses are attached.

We would recommend a review of the sampling, logging, and reporting procedures currently in place to insure accurate data is available. There are a few recommendations for the operation of the system as well as some physical improvements to the infrastructure that may improve the effectiveness of the disinfection regime.

Following are some recommendations based on our observations over the last few weeks. These are generally identified in the order of what we believe would be the least costly to the more expensive.

Overall System

1. **A flushing regime should be initiated to “pull” the residual to the extremes of the system.** Testing has indicated that even with high disinfection concentrations at the plant, very low residuals exist in the distribution system at times. While flushing results in water lost for consumption, it is generally unavoidable and all systems find it necessary to maintain disinfection residual. We would recommend installing automatic flush valves at strategic locations to facilitate this. Once the flushing achieves the intended effect, it can often be curtailed to a lesser amount.
2. **A yearly “burnout” should be considered.** Burnouts, a process in which chloramines are temporarily replaced with the stronger free chlorine, is a good way to reduce the potential of bacterial growth in the distribution system. This is a common practice and is not harmful to residents. However, it can result in abnormal taste and odor in the water and it requires coordination with the TCEQ and residents. The recent testing does

not indicate that a burnout would resolve the residuals concerns that have been expressed, however, it is a good preventative tool.

Thurber and Smokestack Areas

1. **Improve circulation at the Thurber Pump Station.** The ground storage tank at the Thurber Pump Station is a single in/out configuration so that water enters and exits through a single pipe at the bottom of the tank. Our understanding is that the tank is operated at a constant level to maintain a volume of water in the tank. This leads to stagnant water in the tank and a loss of residual. We recommend setting the tank to drop several feet and then refill regularly to help move more water out.
2. **Install an automatic flush at a low point between Thurber and the Smokestack.** This would draw more water through the system and improve residual at the Smokestack as per the flushing discussion above.
3. **Reconfigure the piping on the Thurber Pump Station tank to include a separate fill line.** Installing a separate line that fills at the top of the tank and continuing to drain from the bottom will greatly improve the circulation of water at this site.
4. **Install a chloramine feed system at the Thurber Pump Station.** This would allow a lower feed at the water plant and less flushing on the Thurber end of the system.
5. **Install a loop under the interstate so that the smokestack is fed from the Thurber Pump Station.** This would create the opportunity to circulate the water and possibly reduce the amount of flushing. Along with a chloramine feed system at the Thurber Pump Station, this should greatly improve the residuals at this end of the system.

If you have any questions, please feel free to call me at (817) 594-9880, or email me at adt@jacobmartin.com.

Sincerely,

Derek Turner, P.E.

		Houtson				Barton				Thurber				Dairy Land			
Date	Time	TC	Mono	FA	pH	TC	Mono	FA	pH	TC	Mono	FA	pH	TC	Mono	FA	pH
20-Sep		3.89	3.78	0.32	8.2	3.37	3.14	0.36	8.17	0.52	0.29	0.6	8.1	1.54	1.09	0.58	8.12

Notes: We also checked smokestack, residual was a TC-0.32 and FA-0.60

Date	Time	TC	Mono	FA	pH	TC	Mono	FA	pH	TC	Mono	FA	pH	TC	Mono	FA	pH
23-Sep	1:55 PM	4.19	4.23	0.23	8.23	2.98	2.79	0.32	8.18	0.24	0.18	0.53	8.1	1.92	1.47	0.55	8.14

Notes:

Date	Time	TC	Mono	FA	pH	TC	Mono	FA	pH	TC	Mono	FA	pH	TC	Mono	FA	pH
25-Sep	7:30 AM	0.07	0.04	0	8.1	3.83	0.24	0.6	8.22	1.08	0.94	0.6	8.15	1.78	1.24	0.57	8.16

Notes: At houston after a 32 min flush the residual finally came up to TC-4.56, Mono-4.44, and FA-0.33. Areas of concern having to flush that long to get the desired quality of water to residential meter.

Date	Time	TC	Mono	FA	Nit	TC	Mono	FA	Nit	TC	Mono	FA	Nit	TC	Mono	FA	Nit
30-Sep	12:30	4.56	4.56	0.14	0.014	3.86	4.26	0.27	0.018	1.12	0.98	0.57	0.023	3.9	3.71	0.31	0.016

Notes: At the Thurber tank it looked like the area was previously flushed before arrival.

Chlorine levels coming into town are beginning to get to high.

Date	Time	TC	Mono	FA	Nit	TC	Mono	FA	Nit	TC	Mono	FA	Nit	TC	Mono	FA	Nit
2-Oct	7:25	0.13	0.11	0.05	0.391	4.05	4.06	0.4	0.015	1.22	0.97	0.6	0.026	2.62	2.27	0.43	0.015

Notes: Area of concern again that after a 25 min flush, I could only get a TC-0.23. Residual at barton shows that the water leaving the tank was higher than a .23 but still adequate water should be supplied to the meter at all times that close to the storage tank.

Date	Time	TC	Mono	FA	Nit	TC	Mono	FA	Nit	TC	Mono	FA	Nit	TC	Mono	FA	Nit
7-Oct	12:20	4.52	4.59	0.19	0.015	3.47	3.22	0.4	0.014	0.37	0.34	0.49	0.133	3.68	3.46	0.42	0.009

Note: residual did not chage after a 16 min flush at houston. Please note the correlation of residuals between Houston and Barton.

Date	Time	TC	Mono	FA	Nit	TC	Mono	FA	Nit	TC	Mono	FA	Nit	TC	Mono	FA	Nit
4-Nov	12:00	0.23	0.15	0.2		0.21	0.15	0.18		0.62	0.6	0.33		2.34	2.25	0.43	

Notes: Results are after a 15 min flush on houston and a 5 min flush at Barton. Barton is tapped directly off the main and should not take more than a min to get a representative sample of the water main.
